Fresh Oil System

Baker Commodities Inc.
Recycling for Life

Baker Commodities fresh oil products are available in racking and bulk system equipment configurations that can be located in kitchen areas, inside remote locations or outdoors for the ultimate in floor plan flexibility.

Fresh Cooking Oil Rack System

Baker's Fresh Oil Rack system replenishes frypots with fresh oil when needed from the Jug-in-Box (JIB), eliminating the need to retrieve oil containers from storage and manually refill the fryer, saving labor and protecting workers' safety. All oil is removed, which also provides cost savings.

- Heavy gauge stainless steel construction
- Free standing
- 105lb/14 gal Fresh Oil capacity
- Control panel with alarm
- UL, UL Sanitation (NSF) Listed (US & Canada)
- Suitable for automatic top off systems

Fresh Oil Pump Station

- Fresh Oil Pump Station allows for the pumping of fresh cooking oil
- Connects to remote oil source providing a steady safe flow of fresh cooking oil to the fryer
- Fresh oil pump station is located near the fresh oil source and is pumped via flexible food grade plumbing to an outlet port near the fry stations
- With a flexible Teflon hose connected to the outlet port, the oil is directed into the fryer vats by the operator. The oil flow is controlled by using the fresh oil fill wand (not shown)
- The oil source can be a bulk fresh oil tank or fresh oil can be siphoned by the New Oil Pump Station directly from the new oil containers delivered by your oil provider

Benefits

- Works with all Baker Commodities containment tanks
- No handling of cooking oil
- Less employee downtime
- Labor savings and greater employee safety
- Cleaner grounds and image
- More cost effective to purchase oil in bulk
- Avoid possible pollution fines
- Easy to access and service components
- One year warranty on all parts and components
